

Checking the Mail Summary email on a daily basis

There has been good email that is being blocked and the only way to see this is if you check the mail summary. It lists email that is considered spam and what is considered good email. The top part is all the spam, this is where you really need to double check for anything that is blocked incorrectly. If you find anything that isn't spam then click either Deliver Once or Always allow. This is the best way to ensure that you get the messages you need.
